Solutions for Fiberglass Mat Producers

VISCOSITY MODIFIERS

Proprietary products widely used throughout the industry

- Optimizes physical properties of the mat and improves production speed
- Improves product quality by optimizing feed and system hydraulics and facilitating timely troubleshooting to prevent system upsets

DISPERSANTS

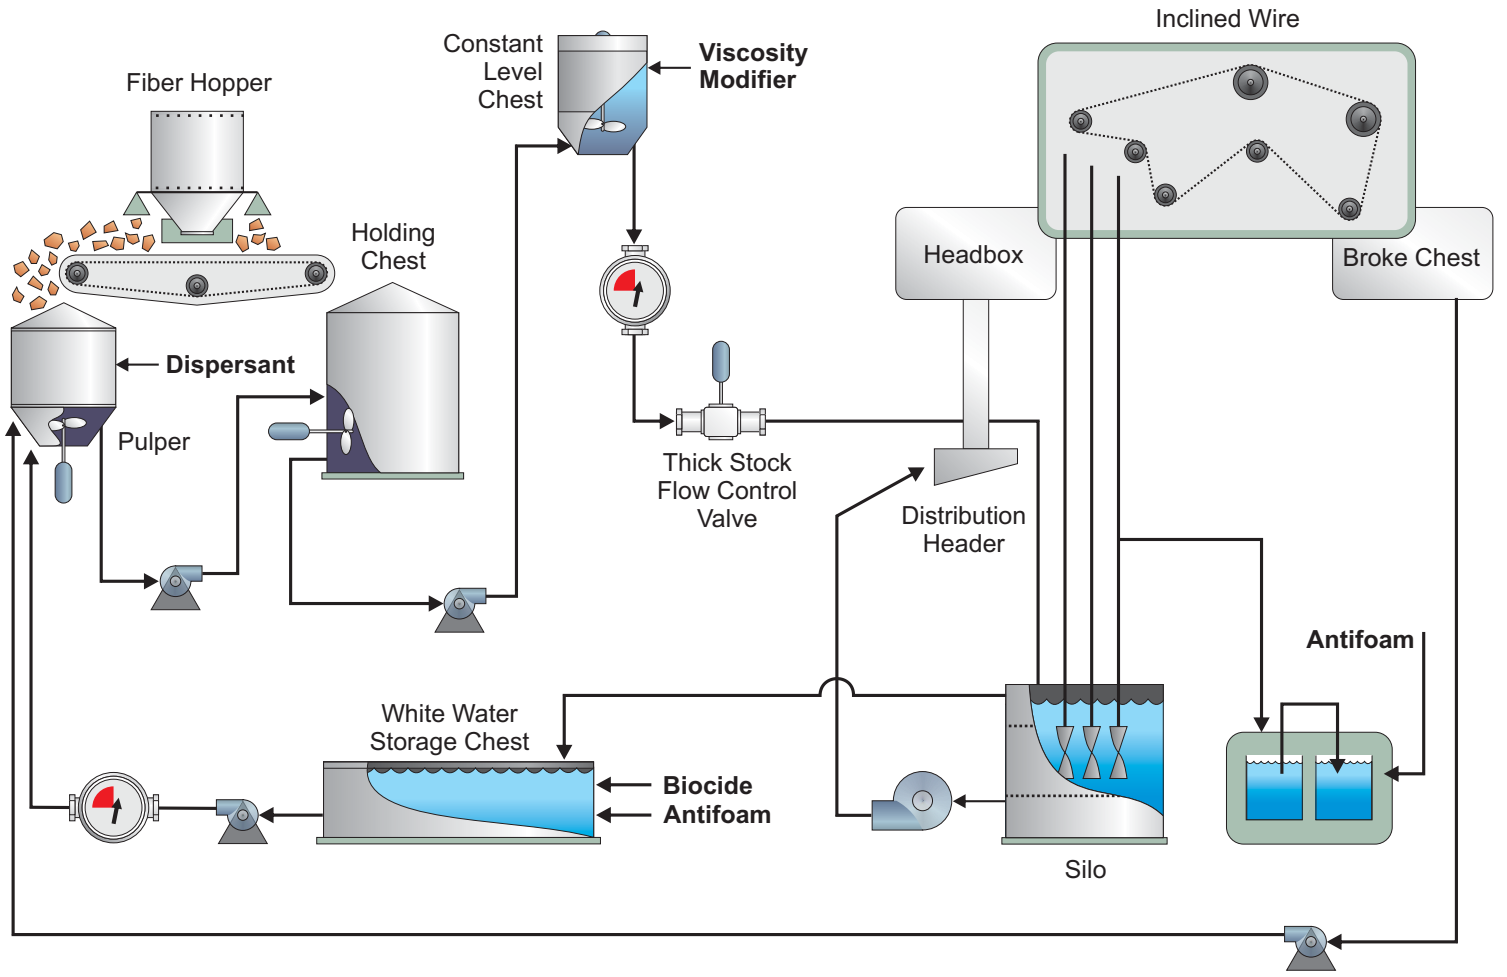
Unique, concentrated product includes a proprietary test to measure dispersant concentration within minutes

- Improves mat dispersion resulting in superior physical properties with reduced defects
- Improves product quality by optimizing feed and system hydraulics and facilitating timely troubleshooting to prevent system upsets

MICROBIOLOGICAL CONTROL

The latest technology to monitor and control microbial population in your process with automated, closed systems to feed safely. We also offer advanced DNA-based microbial monitoring and program testing for continuous improvement, trouble-shooting and evaluation of best programs.

- Improves product quality and mat speeds due to enhanced whitewater dispersion and defect control



ANTIFOAMS

Proprietary products for controlling binder and whitewater entrained air and surface foam with online continuous air entrainment monitoring and control via 4D Air™ Technology

- Improves mat quality and production
- Optimizes antifoam feed for cost and production improvements

VALUE ADDED SERVICES

- Operator training and seminars
- Analytical and technical service
- Onsite auditing and equipment consulting
- Water reuse and recycle audits
- PORTA-FEED™ chemical delivery system
